

ABSTRACT OF THE DISCLOSURE

The movable personal computer using system is located inside the instrument panel of a motor vehicle and has a PC holder on which a movable personal computer is set on. The movable personal computer is connectable to the CAN of the motor vehicle and has a screen showing different information on four partial areas of the screen at the same time. The screen is reflected by the mirror member toward a driver to see its virtual image. The mirror member is moved to show the virtual image reflecting partial area that appears information different from another partial and selectively shift the virtual image of the screen from the one partial area to the another partial area of the screen.
